

Building an Economic Engagement Network Between Africa and the Caribbean

By:

[Ainsley Brown](#)

September 15, 2021

Africa and the Caribbean are forever linked by unbreakable bonds of history, culture and blood. However, economically we are literally and figuratively an ocean apart.

Trade and investment between Africa and the Caribbean are by all accounts low, putting it mildly. The trade data between Africa and the Caribbean Community CARICOM, the bloc of 15 Member States, tells the tale:

“CARICOM countries exported US\$449 million worth of goods to Africa in 2017, representing 2.6 per cent of CARICOM’s total exports to the world. Whereas, the region imported US\$258 million worth of goods from the continent in that same year. Africa’s exports to CARICOM represented a mere 0.06 per cent of its total world exports in 2017.”

But how do we change this?

The connections that Africa and the Caribbean build and maintain between each other and with third parties are critical if both regions are to increase their economic interactions. To achieve this aim, it is argued in this paper that both regions need to build an Economic Engagement Network, inclusive of agreements and countries that optimize a unified African and Caribbean vision to seek greater global economic participation.

What is an Economic Engagement Network?

An Economic Engagement Network is the series of international agreements that a nation or bloc of nations has entered or seeks to enter into that will benefit its economy by creating the platform for more significant trade and investment. Central to developing the Economic Engagement Network is facilitating inter-connectivity to the rest of the world, allowing for the freer movement of goods, services, people, capital and data.

An Economic Engagement Network is about how nations can improve their competitiveness by finding and creating value through the complex interplay between the various agreements (e.g. trade, investment treaties, double taxation agreements, air service agreements, standards mutual recognition, etc.) that they enter between each other. This will require a total mindset change on the part of African and Caribbean policy makers, businesses and workers alike to view these agreements not in isolation but as networks and platforms that support global value chains. As the economist Richard Baldwin reminds us:

“The contours of industrial competitiveness are now increasingly defined by the outlines of international production networks rather than the boundaries of nations.”

As such, building an Africa-Caribbean Economic Engagement Network has to place within the context of modern production practices factoring in:

1. Globalization;
2. The vertical fragmentation of production and the rise of intermediate goods trade; both of which have resulted in the creation of global value and supply chains;

3. Multinational inter-related company trade and the resulting transfer pricing schemes;
4. The ever-blurring lines services and manufacturing;
5. The ever-blurring lines between trade and investment.
6. The 4th Industrial Revolution

A nation’s development and prosperity are increasingly joined to its connectedness to the rest of the world. In today’s world of globalization, it is not sufficient to have market access or attract foreign direct investment (FDI); it has become necessary to turn that market access into market presence and use FDI to “[catalyze or facilitate the accumulation of capabilities](#)” within an economy; this is where an Economic Engagement Network comes in handy.

Properly understood, an Economic Engagement Network is not simply a collection of agreements between nations. Instead, it is how the interaction between various types of agreements can be leveraged to benefit the signatories. This is what I call the Economic Engagement Advantage. **Figure 1** below sets out three Economic Engagement Advantage examples, making a clear link between investment treaties and double taxation agreements that combine to provide investors with commercial certainty and enhance investor confidence, resulting in greater foreign direct investment (FDI).

Figure 1 - Examples of Economic Engagement Advantage

Agreement	Economic Engagement Advantage	Agreement
<u>Trade Agreement</u>	<ul style="list-style-type: none"> • Both support the movement of goods and services (e.g. e-commerce) <p>Result: <i>Greater trade</i></p>	Air Service Agreement
<u>Investment Treaty</u>	<ul style="list-style-type: none"> • Both provide investors with commercial certainty and enhances investor confidence <p>Result: <i>Greater FDI</i></p>	Double Taxation Agreement

<p><u>Standards Mutual Recognition Agreement</u></p>	<ul style="list-style-type: none"> • Both allow for greater trade facilitation by addressing <u>non-tariff barriers</u> and <u>technical barriers to trade</u> <p>Result: <i>Greater global value chain participation and export diversification</i></p>	<p><u>Customs to Customs</u></p>
---	--	----------------------------------

Of course, an Economic Engagement Advantage can be forged not just between two agreements but between multiple agreements. The point here is that if appropriately used, each agreement creates Economic Engagement Advantages by enhancing and re-enforcing each other.

It is important to note that an Africa-Caribbean Economic Engagement Network would not just be about Africa and the Caribbean entering into a series of agreements. While these agreements, which now do not fully exist, are a necessary foundation, they are not enough. The Africa-Caribbean Economic Engagement Network has to utilize the agreements that each has with third countries or country blocs to optimize the flow of goods, services, people, and data and improve FDI stock. In other words, the Africa-Caribbean Economic Engagement Network ought to be built around and be supportive of the system of modern production and global value chains.

Most modern trade and investment are centred around global value chains (GVCs). Unfortunately, both Africa and the Caribbean have low levels of GVC participation. The Latin American and Caribbean (LAC) Region and it can be equally said for Africa has “low participation in global value chains, both in their percentage share and in the stages in which they are involved, which is mainly concentrated in exporting raw materials or derivatives.” Africa’s global share, according to the World Bank of GVC, participation between 2000 and 2018 has remained at a constant 3%. The LAC, for its part, is not doing much better at about 4%. However, an Africa-Caribbean Economic Engagement Network creates an opportunity for Africa and the Caribbean to rectify this and change their collective fortunes by creating, adding and capturing value to enhance the prosperity of both regions.

According to [McKinsey and Company](#), due to the Covid-19 and for [pre-pandemic](#) reasons, “[up to one-quarter of global goods exports – worth US\\$2.9 trillion to US\\$4.6 trillion annually – could feasibly shift to different countries in the next five years or so, though the potential varies considerably across industries.](#)” Thus, the recovery period from the COVID-19 Pandemic is an opportune time for prioritizing an Africa-Caribbean Economic Engagement Network. An Africa-Caribbean Economic Engagement Network creates a framework to direct some of this potential shift in global goods export to Africa and the Caribbean. However, Africa and the Caribbean will have to build their productive capacity for this shift to be feasible.

Productive Capacity

Africa and the Caribbean have long had an ‘export or die’ mindset; however, it is not simply about exporting anymore in today’s globalized world, with its complex supply and global value chains. It is about using trade and investment to build one’s productive capacity. The United Nations Conference on Trade and Development (UNCTAD) defines productive capacities as “[the productive resources, entrepreneurial capabilities and production linkages, which together determine the capacity of a country to produce goods and services and enable it to grow and develop.](#)”

UNCTAD in its groundbreaking [Productive Capacity Index](#) (PCI), which is available as an online tool that allows “[policymakers to measure their countries’ performance in achieving their national development goals, as well as their ability to meet the UN’s Sustainable Development Goals \(SDGs\),](#)” establishes a clear link between higher Productive Capacity and both higher GDP and export diversification as illustrated in **Image 1 and 2** respectively.

Image 1 - UNCTAD PCI

Correlation between the Productive Capacities Index and the Merchandise Export Concentration Index, 2018

UNCTADSTAT

Image 2 - UNCTAD PCI

Correlation between the Productive Capacities Index and Gross Domestic Product per Capita, 2018

If we examine two of Africa’s top performers, Mauritius ranked 46th of 193 countries and South Africa ranked 74th and two of the Caribbean’s top performers, Barbados ranked 40th and Trinidad and Tobago ranked 48th, we see from **Figure 2** below that the better the PCI ranking, the better the selected nations performed in GDP per capita. According to UNCTAD, [“this is to be expected, as productive capacities determine the capacity of an economy to produce goods and services.”](#)

Figure 2 - Productive Capacity Index, Africa and Caribbean Comparison

	Country	PCI	GDP	GDP per Capita - 2018 (USD)	Mechandise Export Concentration Index*
Africa					
	Mauritius	46th	\$14.182 billion	\$10,578	0.22

	South Africa	74th	\$ <u>368.289</u> billion	\$7,433	0.13
Caribbean					
	Barbados	40th	\$ <u>5.087</u> billion	\$16,018	0.16
	Trinidad and Tobago	48th	\$ <u>23.808</u> billion	\$15,161	0.34

**Merchandise Export Concentration Index function on a scale of 0 to 1. The close to zero a country it the more diverse its exports and the close the 1 the less diverse.*

While it may appear that **Figure 2** does not depict a clear correlation between a better PCI score and greater export diversification on the Merchandise Export Concentration Index, for example, South Africa (74th) has a lower PCI than Mauritius (46th) and Barbados (40th) but a better Merchandise Export Concentration Index score of 0.13, than Mauritius at 0.22 and Barbados at 0.16. However, looks can be deceiving as the correlation is a general one. When all 193 countries are examined, it is clear that generally speaking, a better PCI score lends itself to greater export diversification.

Developing mutual Productive Capacity is, therefore, at the heart of building a successful Economic Engagement Network. For an African-Caribbean Economic Engagement Network to not only emerge but be a success will require great levels of cooperation, coordination and capacity building. A first initial step toward such success would be to capture the data on each side’s series and variety of agreements. **Figure 3** below gives a quick snapshot of such an exercise.

Figure 3 - African-Caribbean Economic Engagement Network Data Capture of select economies

	Country	Economic Engagement Network				Economic Impact		
--	---------	-----------------------------	--	--	--	-----------------	--	--

		Trade Agreements	BITs	Double Taxation	Air Service	GDP	GDP per capita 2018 (USD)	FDI
Africa								
	Mauritius	15	48	46	19	\$ 14.182 billion	\$10,578	\$ 371,518 , million
	South Africa	11	50	79	59	\$ 368.289 billion	\$7,433	\$ 5.569 billion
Caribbean								
	Barbados	10	11	40	21	\$ 5.087 billion	\$16,018	\$ 241,596 , million
	Trinidad and Tobago	11	13	26	Full data not found	\$ 23.808 billion	\$15,161	\$ 700,185 , million

Types of Agreements

But what types of agreements?

Trade and investment policies have been traditionally guided by the concept of increasingly selling goods (and services) in the global marketplace; however, with the rise of global value chains, a new type of thinking is required to reflect current business realities. This new reality is one where the global trading system is based on production and inter-connectivity. Barriers to trade (tariff or non-tariff) or investment, therefore, take on a whole new dimension for policymakers when examined from this angle. The objective of creating an Economic Engagement Network it must be remembered is to attract FDI that facilitates global value chains.

As such, trade is not simply about trade in goods and or services. Instead, the means by which these goods and services are delivered has become of equal importance and has given rise to the ever-blurring lines between trade and investment and between goods and services trade. Therefore, the importance of other types of agreements, inclusive of trade agreements, to an Economic Engagement Network cannot be overstated.

While there is no exhaustive list of agreements that should constitute any given Economic Engagement Network, the point is to remain flexible. Africa and the Caribbean, if it chooses to build an Africa-Caribbean Economic Engagement Network, may wish to examine a few or all of the list below:

1. Trade Agreements
2. Investment treaties
3. Double Taxation
4. Air Service Agreements
5. Port and Airport Access Agreements
6. Special Economic Zone Co-Development and co-production Agreements
7. Standards and mutual recognition

An African-Caribbean Economic Engagement Network is a grand vision of bold design and will not be easy to achieve; however, the fact that it is possible should be cause for optimism.
